First learning session

1. Getting started
   a.test all the queries using the collection from the presentation:
   https://gitlab.com/astefan/ct_workshop_api/-/blob/master/CTWorkshop%20shortFlow.postman_collection.json
   b. use the project with the resources imported from Sunrise:
   https://github.com/commercetools/commercetools-sunrise-data
   c. try and complete the next tasks (in Postman)
   - sort products by price
   - retrieve products with limit 30
   - expand product type reference within a product
   - pagination - display products from 20 to 30
   - update product and verify the version
   - delete product

2. Project settings
   You will be added to a new CommerceTools organization named "workshop".
   a. create a new project in this organization
   b. create all the necessary resources for 'International'
   c. create all the necessary resources for 'Taxes'
   d. create all the necessary resources for 'Shipping methods'

3. Products
   a. create all the necessary resources in order to be able to create a product
   - create a product type with at least one required attribute
   - create a product type without required attributes
   b. create a product - two ways -> merchant center and http api

4. Reading tasks:
- product
  https://docs.commercetools.com/http-api-projects-products#products
- product data modelling guide:
  https://docs.commercetools.com/product-modeling-overview
- tax categories
  https://docs.commercetools.com/http-api-projects-taxCategories#tax-categories
- shipping methods
  https://docs.commercetools.com/http-api-projects-shippingMethods#shipping-methods
